Motor-driven refrigeration units for trucks. Our motor-driven units can be efficiently powered by HVO100. They have been on the market for over 10 years and are a reliable refrigeration system with modern technology. Thanks to the 3D-scroll compressor and a well-thought-out design, service and maintenance can be easily performed. With electronic expansion valves and an [hellip;]

Product data

Motor-driven refrigeration units for trucks. Our motor-driven units can be efficiently powered by HVO100. They have been on the market for over 10 years and are a reliable refrigeration system with modern technology. Thanks to the 3D-scroll compressor and a well-thought-out design, service and maintenance can be easily performed.

With electronic expansion valves and an economizer, the cooling capacity is regulated efficiently, making the “cool-down” experience incredibly fast.

Advantages

High cooling capacity

Easy handling

Low noise level

Compact design and service-friendly

Reliable operation

Measurements

Condenser

Condenser lower part

Evaporator

Technical specification

Model	Monotemp
Cooling capacity at 0°C	Upp till 9 700 Watt
Cooling capacity at -20°C	Upp till 5 500 Watt
Airflow rate	2 000 m ³ /h
Airflow	10 m/sec
Weight (incl. evaporator)	462 kg
